# Disclaimer

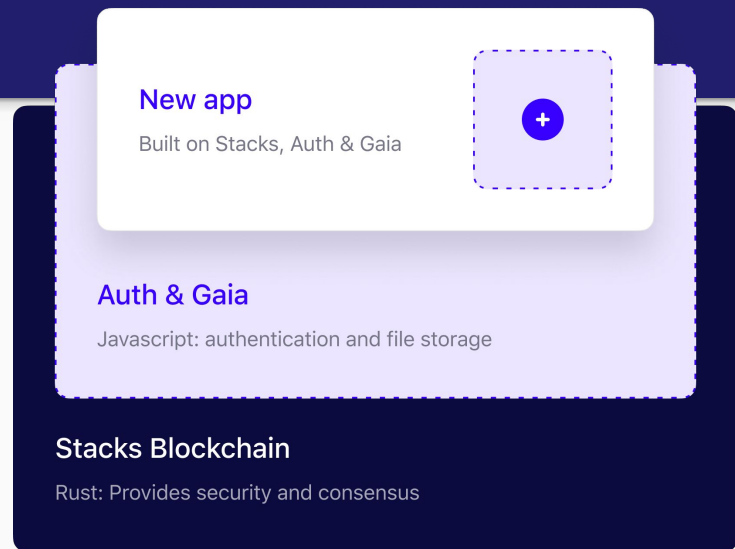

**Technology in new  
Society not ready  
No financial advice**

# Blockstack

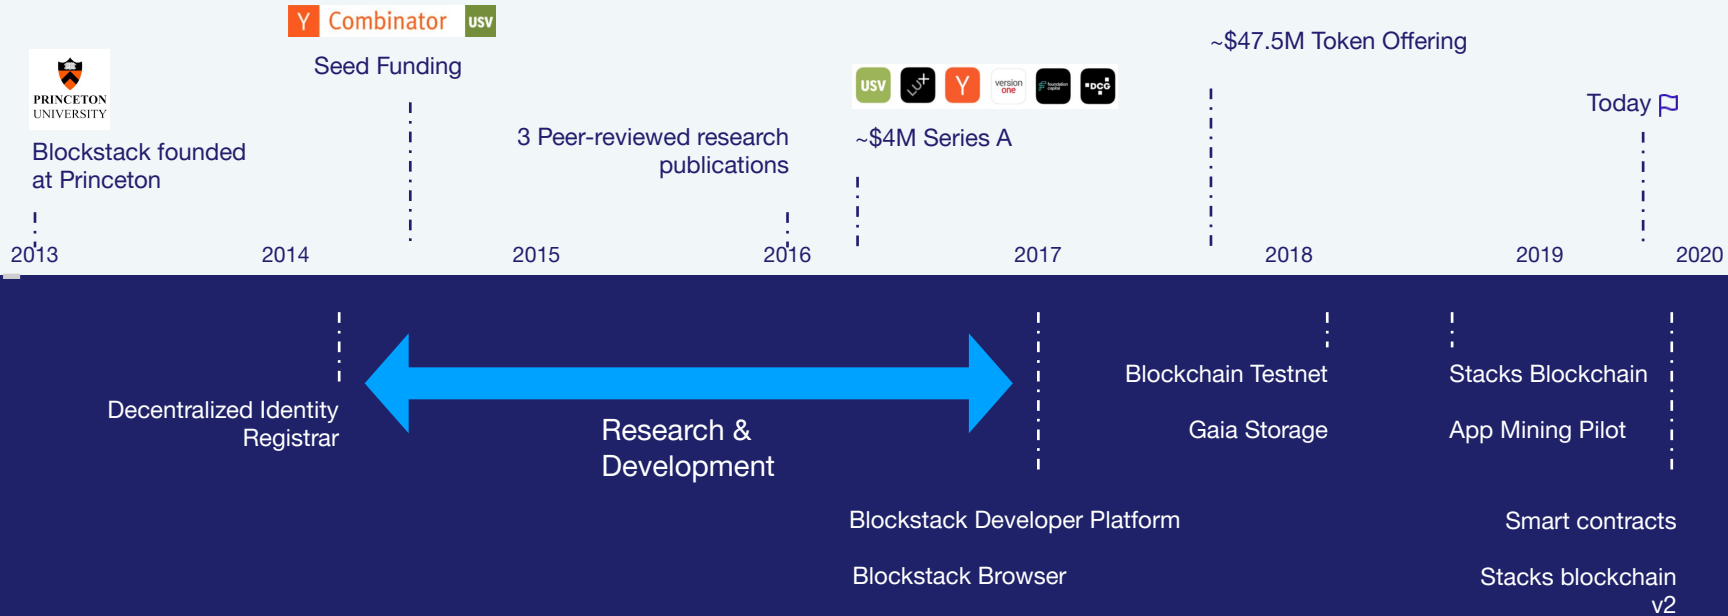

“We abstract the Blockchain complexity so app developers can focus on building great apps”

- Keep auth and smart contracts on-chain
- Keep encrypted data off-chain
- Wrap everything in an easy JavaScript API

Any javascript developer can build a Blockstack app in 1 hour. No coding language to learn.

# Blockstack History

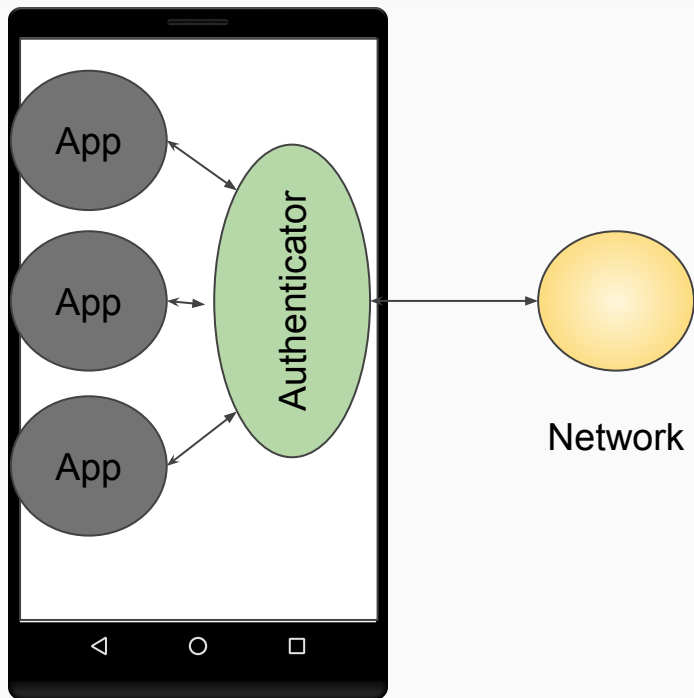

# Decentralized Identity

- Self-sovereign
- Verifiable
- Person vs. profiles
- No more passwords
- W3C working group

*Cryptographic Keys*

# Decentralized Identity - “Login”

Forget about OAuth dance!  
Forget about email!

**Use Decentralized Identifiers (DID)**  
*did:example:123456789abcdefghi*

45 different DID methods  
Blockstack is one of them

# Decentralized Storage

- Diversity in locations
- Distributed vs. self-controlled
- Server-less apps

Blockstack:  
Gaia protocol

# Blockstack Login

```
const {signIn, person} = useBlockstack()
```

```
const userSession = new UserSession(appConfig)
```

```
userSession.redirectUserToLogin()
```

```
userSession.handleAuthResponse()
```

# Blockstack Storage

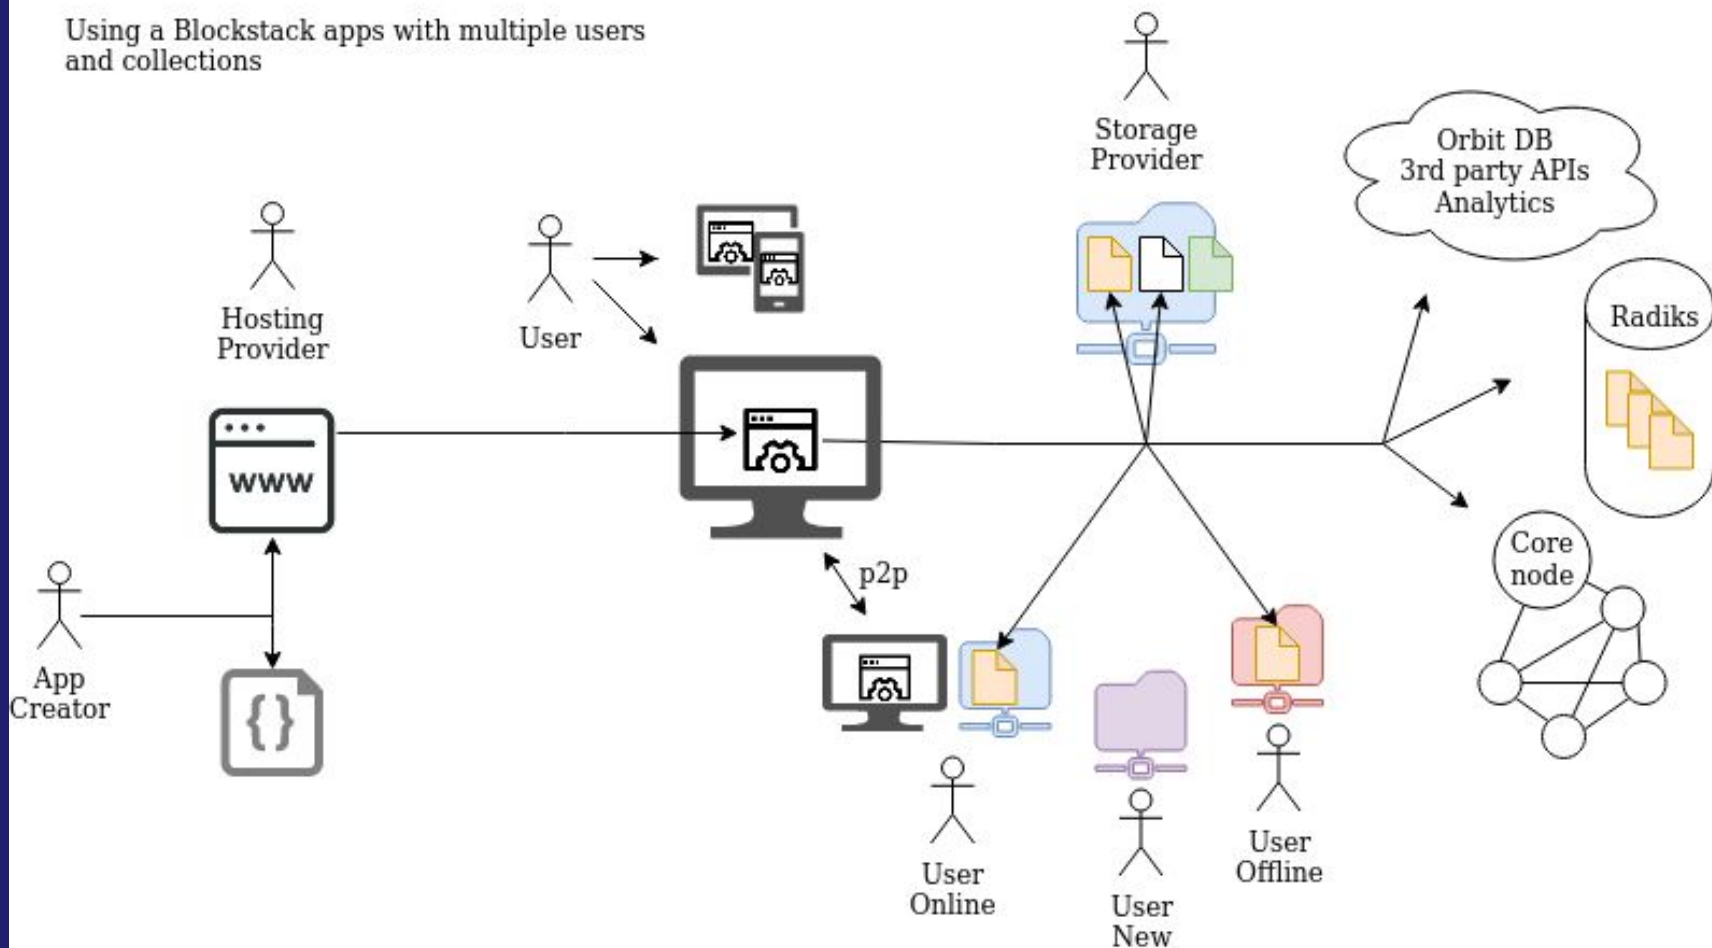

```
const [note, setNote] = useFile("note.txt")
```

```
userSession.putFile("note.txt", note, options)
```

```
userSession.getFile("note.txt", options)
```

# Blockstack Storage

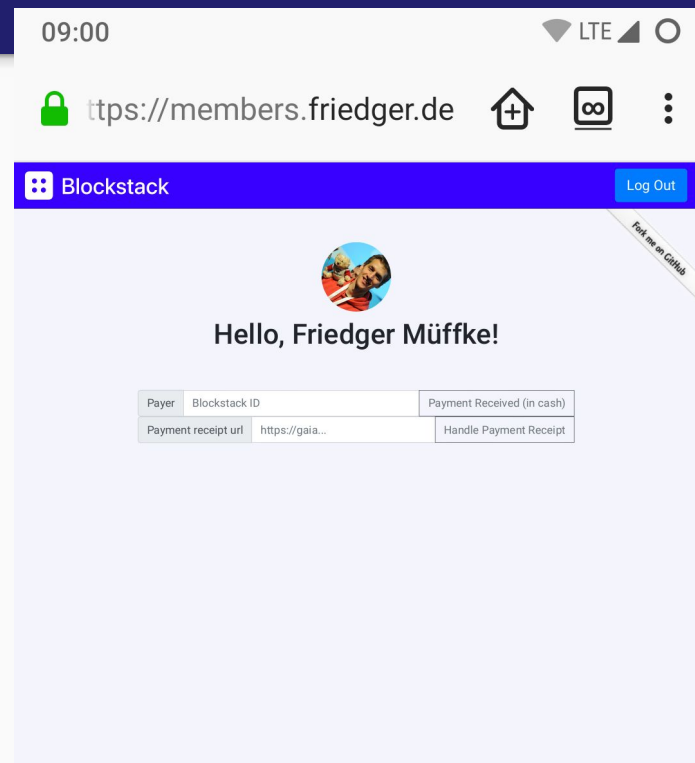

Using a Blockstack apps with multiple users and collections

# Membership App

1. Create + Store token
2. Fetch + Verify token

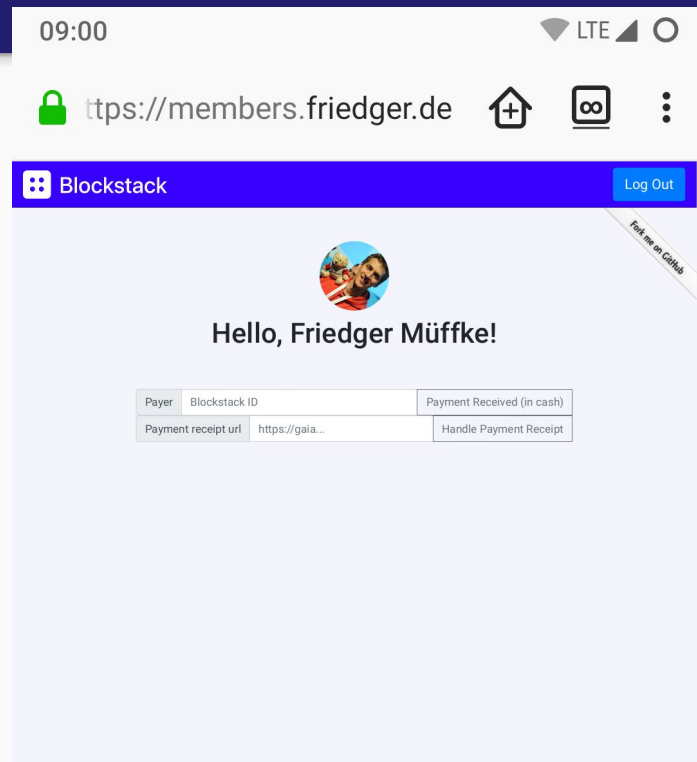

Payment Receipt Token  
Membership Token

# Membership App - Create + Store Token

```
signProfileToken(  
    claim, userData.appPrivateKey)
```

```
userSession.putFile
```

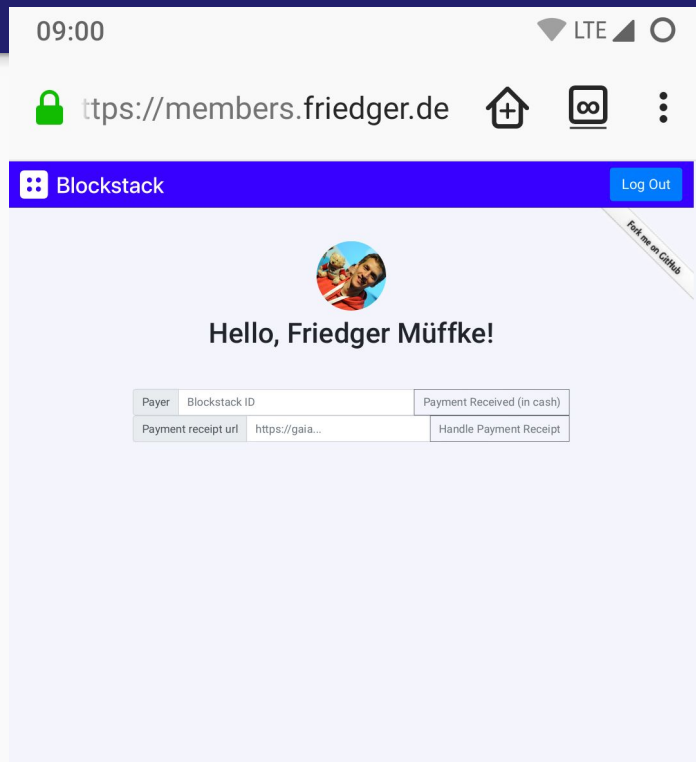

# Membership App - Fetch + Verify Token

```
fetch(gaiaReadUrl)
```

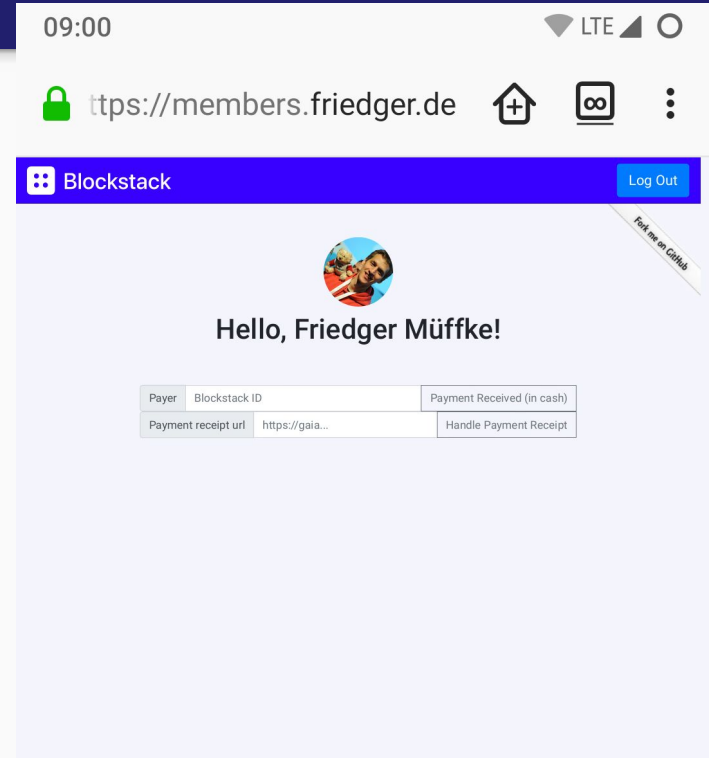

```
const appPublicKey =  
  publicKeyFromPrivate(  
    userData.appPrivateKey)
```

```
verifyProfileToken(  
  token, appPublicKey)
```

# Membership App - Bonus

- Private Membership encrypt for member(s) only
- Members List store links
